

When's the last time your combine broke—in the barn or in the field?

If you wait to check your combine's performance during the harvest instead of before, you've just put yourself in a vulnerable position. First, how many combines in this region could fail once they get out there? Hundreds. Now, how many dealers with competent technicians are around to fix all of those combines? Less than a dozen. Get the picture? If you wait until harvest and

your combine breaks down, you're going to wait even longer for repairs. And emergency repairs always cost more than planned maintenance. But the solution is simple. Nip the problems in the bud now before they put your harvest behind. Call Polen Implement and get your combine ready for a smooth-running, trouble-free harvest today.
